SKILLS

Programming Languages: Java, Python, JavaScript, HTML/CSS, React, Vite/Next.js, Node.js, Express.js

Frameworks & Tools: SpringBoot (basic), Git

Technical Knowledge: Low-Level & High-Level Design (LLD & HLD), Database Management (SQL & MongoDB), Project Management

AI/ML: Basics of Machine Learning, Beginner in PyTorch

Languages: English, Hindi

PROJECTS

[ApplImage Manager for Ubuntu Linux](#) | Python, Tkinter, ttkbootstrap, Linux Desktop Integration

- Built a modern GUI application to simplify ApplImage installation and management on Linux systems.
- Implemented automatic WMClass detection and parsing of internal
- `.desktop` files from ApplImages.
- Designed a clean, tabbed interface with file/folder discovery and real-time scanning capabilities, demonstrating skills in desktop application development and Linux integration.

[Universal Media Downloader](#) | React, Vite, Firebase, Vercel (Backend), JavaScript

- Developed a privacy-focused, full-stack web application for downloading media from various online platforms.
- Implemented dynamic format selection with real-time video previews and metadata display.
- Deployed with a React frontend on Firebase and an API backend on Vercel, showcasing modern frontend frameworks, API integration, and cloud deployment.

[Banking System with SQL in Java](#) | Java, MySQL, JDBC

- Created a command-line banking application with persistent data storage using SQL databases.
- Improved upon previous CSV-based version for better efficiency and data integrity.
- Implemented core banking operations including account management and transaction processing, demonstrating skills in database design and Java backend development.

[Currency Converter in Java](#) | Java, REST API Integration

- Built a Java application that fetches real-time currency exchange rates from external APIs.
- Implemented API consumption and JSON parsing for live currency conversion.
- Created an intuitive command-line interface for user interaction, demonstrating skills in API integration, HTTP requests, and Java application development.

[TaskFlow - Todo List Application](#) | HTML5, CSS3, Vanilla JavaScript, LocalStorage API | [Live Demo](#)

- Created a responsive todo-list application with persistent data storage using browser

LocalStorage.

- Implemented CRUD operations with automatic task numbering, timestamp generation, and completion tracking.
- Demonstrates skills in DOM manipulation, event handling, local storage management, and responsive CSS design.

[PyTorch AI/ML Projects](#) | Python, PyTorch, Machine Learning

- Developed machine learning experiments and utilities using the PyTorch framework.
- Explored deep learning concepts and neural network implementations, demonstrating skills in PyTorch framework and core machine learning concepts.
- Contributed in open-source(not merged) for Visdom Project from FOSSASIA

[Cortex Chat Assistant](#) | React, Node.js, OpenAI API, Socket.io | [Live Demo](#)

- Developed a real-time AI-powered chat assistant capable of maintaining context-aware conversations.
- Implemented secure user authentication and conversation history storage using MongoDB.
- Engineered a responsive frontend interface with real-time message streaming using Socket.io, demonstrating skills in full-stack web development and API integration.

Some Other Small Projects : [Skill Tracker\(SpringBoot\)](#) | [X/O Game](#) | [Menu Mate \(Hostel Mess\)](#)

EDUCATION

Bachelor of Technology in Computer Science & IT

SOA Institute of Technical Education and Research

2024 - 2028 (Expected)
