SKILLS

Web & Frameworks: React, Next.js, FastAPI, Spring Boot, Express.js, WebSockets, TypeScript, JavaScript, Tailwind CSS, Monaco Editor, REST APIs, Vite

Languages & Tools: Python, Java, SQL (PostgreSQL, MySQL, DuckDB), MongoDB, Docker, Git, Linux, Redis, Celery, OpenSearch, Bash, Filesystem Automation

Data Science & AI/ML: Polars, Pandas, Scikit-learn, XGBoost, Statsmodels, SQLAlchemy

PROJECTS

RepoLens - Repository Intelligence Platform | [Live Demo](#) | [GitHub](#)

Tech Stack: Python, FastAPI, Next.js, React, TypeScript, PostgreSQL, SQLAlchemy, Redis, Celery, Scikit-learn

- Developed a repository intelligence platform featuring an interactive dashboard for codebase insights.
- Built a scalable FastAPI backend using Redis and Celery for asynchronous processing and ML analysis.
- Deployed a Next.js interface to visualize engineering metrics and repository data.

CodeSync - Real-Time Collaborative Coding Platform | [Live Demo](#) | [GitHub](#)

Tech Stack: Java, Spring Boot, Spring Security, WebSockets, STOMP, PostgreSQL, React, TypeScript, Monaco Editor, Docker

- Created a platform for real-time collaborative coding with low-latency session synchronization.
- Utilized WebSockets and STOMP to manage live editor updates across multiple users.
- Integrated a Spring Boot backend with a React-based Monaco Editor frontend.

DataForge - AI-Powered Data Intelligence Platform | [Live Demo](#) | [GitHub](#)

Tech Stack: Python, FastAPI, Next.js, React, TypeScript, Polars, Pandas, DuckDB, PostgreSQL, SQLAlchemy, OpenSearch, Scikit-learn, XGBoost, Celery, Redis

- Developed an AI platform for processing and visualizing structured business intelligence data.
- Engineered a high-performance backend using Polars, DuckDB, and OpenSearch for data querying.
- Applied Scikit-learn and XGBoost for predictive modeling and automated analytical reporting.

Applmage Manager - Linux Application Installation & Desktop Integration Utility | [GitHub](#)

Tech Stack: Python, Linux, Bash, Applmage, Filesystem Automation, .desktop Entry Specification

- Built a Linux utility that permanently installs Applmage applications by automatically organizing application files, configuring executable permissions, and integrating them with the desktop environment.
- Automated application icon extraction, .desktop launcher generation, application-menu registration, and filesystem placement, eliminating manual Applmage setup.
- Designed the installation workflow to make standalone Applmage applications behave like conventionally installed Linux applications.

Universal Media Downloader - Web Media Extraction & Download Platform | [Live Demo](#) | [GitHub](#)

Tech Stack: React, Vite, JavaScript, REST APIs, Web Scraping, Media Extraction

- Developed a media extraction tool for discovering and downloading video and web content.
- Designed automated workflows to extract various media formats and metadata from webpages.
- Implemented REST APIs and state management for responsive download processing.

EDUCATION

Bachelor of Technology in Computer Science & IT

SOA Institute of Technical Education and Research

| 2024 - 2028 (Expected)

CERTIFICATIONS

- [Getting Started with Artificial Intelligence](#) - IBM SkillsBuild (Issued: March 10, 2026)
- [AI for Beginners](#) - HP LIFE (Issued: July 14, 2025)

ACHIEVEMENTS

- [QuantumHacks Hackathon Winner](#) - Won hackathon on Devpost organized by Quantum Hacks
